Signing in to Google

Control your password and account access, along with backup options if you get locked out of your account.

Make sure you choose a strong password
A strong password contains a mix of numbers, letters, and symbols. It is hard to guess, does not resemble a real word, and is only used for this account.

3. Click on "Password"

Password & sign-in method

Your password protects your account. You can also add a second layer of protection with 2-Step Verification, which sends a single-use code to your phone for you to enter when you sign in. So even if somebody manages to steal your password, it is not enough to get into your account.

Note: To change these settings, you will need to confirm your password.

| Password | Last changed: June 21, 2012 | > |

| 2-Step Verification | Off | > |

Google

Before you can change your password you will be asked to re-enter you current password.

Please re-enter your password

4. Enter your current password then click "Sign In".

**5. Enter your new password in the "New password" field then
re-enter your new password in the "Confirm new password" field.**

Choose a strong password and don't reuse it for other accounts. Learn more.

Changing your password will sign you out of all your devices, including your phone. You will need to enter
your new password on all your devices.

New password

| 🔑 👁
_____

                                                    Clicking this "Eye" makes the password you are entering visible.

Password strength:

Use at least 8 characters. Don't use a password
from another site, or something too obvious
like your pet's name. Why?

Confirm new password   ◉ 👁

**6. Click "Change Password".
Now your password has been changed.**
